

GROUP 1 ASSIGNMENT

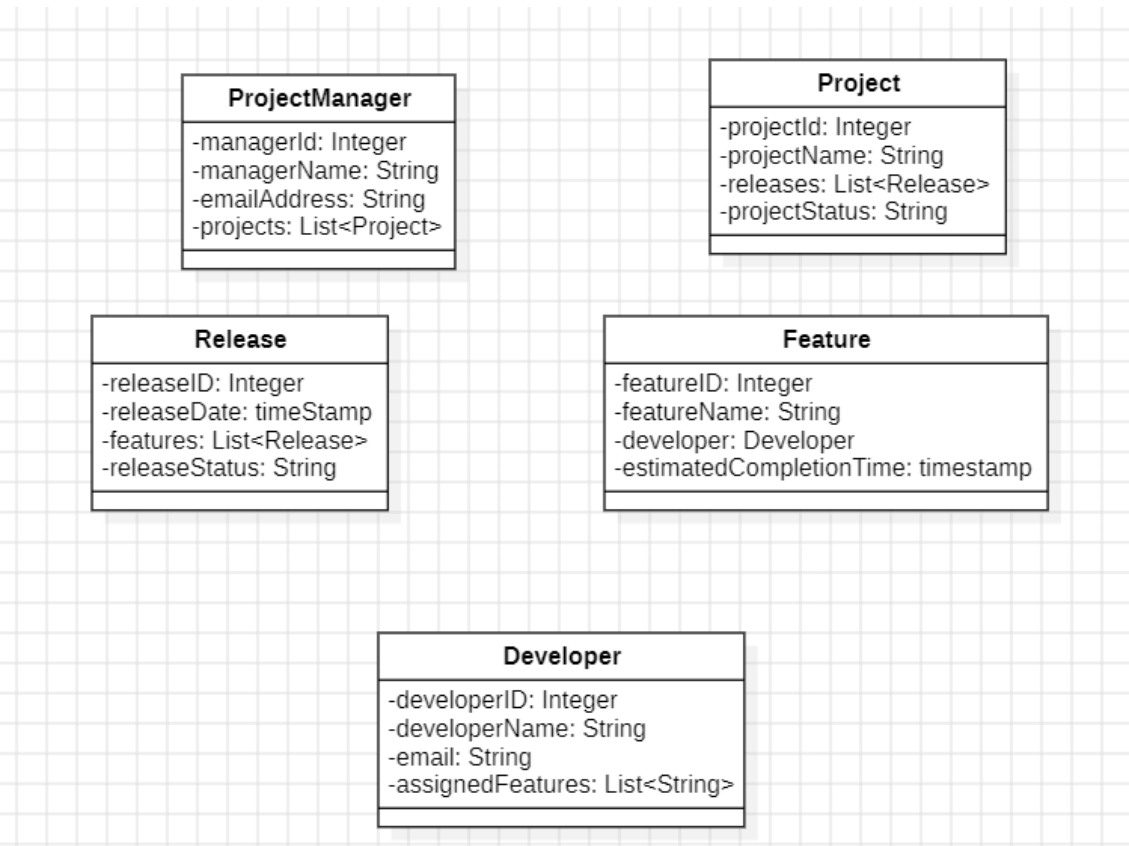

WITHDRAW_MONEY Use Case Description: Main Flow

User Action	System Response
1. User types in PIN into main screen	1. System checks validity of PIN and presents options to user on another screen
2. User selects what they want to do from the options provided by the system on the screen (Imagine the user has selected withdrawal)	2. System provides an input text box for the user to input the money to withdraw.
3. User inputs the amount of money to withdraw	3. The system validates whether the user has that minimum balance in their account and asks the user to confirm the amount of money they want to withdraw also asking if they want a receipt for that transaction.
4. The user confirms the money to withdraw as well as selecting if they want the receipt (Assume the user says they want a receipt)	4. The system asks the user to remove their card, counts the money and presents it to the user through the dispenser, while displaying a confirmation message for the transaction, while also printing the receipt.
